

Drive-In Drive-Through APR.

Drive-In Drive-Through pallet racking is the best option when you have multiple quantities of the same SKU, particularly when there is a premium price on available floor space. This configuration of racking has the greatest possible utilisation percentage of floor space, whilst importantly protecting your product by eliminating the risk of compression damage. Drive-In Drive-Through racking systems are tailored to suit your space, product and quantity requirements.

ISS ProRack will custom design your Drive-In or Drive-Through storage system taking into consideration your specific needs:

- ☑ Efficiency of access requirements – for your type and quantity of palletised product
- ☑ Horizontal and vertical space utilisation – for your current and future flexibility
- ☑ Most suitable lifting equipment – for cash flow and efficiency
- ☑ Safety – we design with people and product in focus

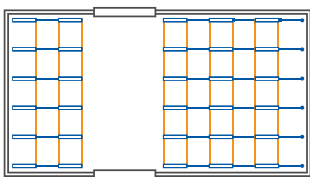

Drive-In Drive-Through

Drive-In Drive-Through configuration offers maximum storage density with an extremely high floor area utilisation. It is recommended for facilities with large quantities of the same SKU. Product retrieval is based on the FILO order.

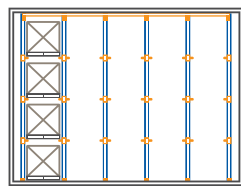

Benefits of Drive-In Drive-Through:

- ☑ Highest floor area utilisation: 60%
- ☑ Provides the space efficiency of block stacking without risking product damage
- ☑ Ideal for applications with a premium on floor space, e.g. cool storage
- ☑ It can be used with a wide range of materials handling equipment
- ☑ Best MHE includes Counterbalance and Reach Truck
